

A triangle is not a sequence and not a table of independent claims — it is a small, structured prediction problem

a loss triangle, abc: 66 observed cells,
and a lower-right half that is the reserve

the same numbers as a prediction task: features restricted to what that
valuation date knew, the realised factor as the target (red)

valuation date	accident year	dev age (months)	latest cumulative	own last ratio	CL factor (prev age)	horizon (steps)	target (realised factor)
k=7	1978	6	823,542	1.0451	1.0304	3	1.0795
k=7	1979	5	920,268	1.0649	1.0459	3	1.1083
